Subject Index

A

Abscisic acid
differential gene expression, chilling-acclimated maize seedlings, 331
endogenous, potato microtuber dormancy, 891
-induced heat tolerance, *Bromus inermis* Leyss cell-suspension culture, 181
induction of peroxidase, antagonism by cytokinin, *Spirodela polyrrhiza*, 497
low water potentials, proline accumulation, maize primary roots, 981
metabolites and analogs, freezing tolerance and gene expression, bromegrass, 823
positive regulation, *NPR* genes, *Lemna gibba*, 949
protection of mitochondria from irreversible chilling injury, maize seedling, 619
response, *Arabidopsis thaliana*, 1203
Abscission, initiation in bean leaves, role for stele in intertissue signaling, 341
Acclimation, protection of mitochondria from irreversible chilling injury, maize seedling, 619
Acetyl-coenzyme A carboxylase, gene structure and expression, *Arabidopsis thaliana*, 611
Acetylene, reduction by symbiosomes and free bacteroids, broad bean nodules, 555
Acidic proteins, 14–3–3 mammalian brain, tomato fruit homologs of, 1457
Adenosine triphosphate, K_ms, corn root H^+-ATPase, use of glucose-6-phosphate and hexokinase, 853
S-Adenosyl-L-methionine:caffeic acid 3-*O*-methyltransferase, cDNA, *Eucalyptus*, 749
S-Adenosyl-L-methionine:tetrahydroberberine-*cis*-*N* methyltransferase, isolation from suspension cultures, *Sanguinaria canadensis*, 395
Aerenchyma, lysigenous, formation and induction of enzymes, corn root, 861
Agrobacterium-mediated transformation, clover, 81
Agrobacterium rhizogenes, *rolB* gene, auxin sensitivity, tobacco protoplasts, 563
Agrobacterium tumefaciens
ocs-like bZip-binding elements, differential strength, bidirectional *mas*1′2′, 259
transformed tobacco cells, cell-autonomous cytokinin-independent growth, 989
Ajuga reptans, leaves, raffinose family oligosaccharide metabolism in, 1335
Alcohol dehydrogenase, hypoxic induction of anoxia tolerance, *Adh1* null *Zea mays*, 61
Aldolases, class II, cyanoplasts and cytosol of algae, 1393
Aleurone, tissue of germinating maize seed, cloning, α-amylase cDNA, 759
Alfalfa
Enod12 genes, differential regulation during nodule development, nod factors and *Rhizobium* invasion, 585
regrowth, nitrogen reserve mobilization, 831
Algae
Chlamydomonas reinhardtii, chloroplasts, carbonic anhydrase activity in, 1197
Chlorella vulgaris, high-light acclimation, mimicry of growth at low temperature, 535
Cyanophora paradoxa, class II aldolases in, 1393
Alleles
dominant *I*, chalcone synthase mRNA, yellow soybean seed coats, 739
genetic regulation of development, *Sorghum bicolor*, 941
Allium cepa, guard cell tonoplast, cationic channel, 999
Alternative oxidase
molecular biology, 781
nuclear gene expression, mitochondrial electron transport regulation, tobacco, 867
Amaranthus hypochondriacus, light harvesting chlorophyll *a*/*b*-binding polypeptide cDNAs, 459
Amino acids
N-terminal sequence, persimmon fruit β-galactosidase, 975
regulation of nitrate uptake, N demand, 3
Amiprophos-methyl, inhibition of high-affinity oryzalin binding, tobacco tubulin, 309
Ammonium, transport analog, methylammonium, tomato, 435
α-Amylase
cloning of cDNA, aleurone tissue, germinating maize seed, 759
gene product, *cis*-acting gibberellin response complex, 151
Anoxia
hypoxic induction of tolerance, *Adh1* null *Zea mays*, 61
hypoxic stress and, different ages, corn seedling, 53
Anthocyanin, ultraviolet-B-responsive production, rice cultivar, 1059
Apple, endopolygalacturonase from, cDNA clone, 1437
Aquaporins, facilitated water movement, living plant cells, 9
Arabidopsis Adh gene, stress responses of, promoter elements in, 1075
Arabidopsis thaliana
acetyl-coenzyme A carboxylase gene, structure and expression, 611
blu3 and *hy4* mutants of, light-stimulated cotyledon expansion, 1433
calcium-dependent protein kinase, cDNA encoding, 1461
cDNA in, transmembrane protein, nucleotide sequence in, 1441
cDNAs encoding carbonic anhydrase, 707
cDNAs encoding imidazoleglycerolphosphate dehydratase, 579
cell wall-localized lipid transfer protein, tissue-specific gene expression, 35
chloroplast glyceraldehyde 3-phosphate dehydrogenase B subunit, light-responsive region of nuclear gene, 357
cloning of cDNA encoding ATP sulfurylase, functional expression in yeast, 897
cloning of plastid ω-6 fatty acid desaturase cDNA, expression in cyanobacterium, 635
defects in redifferentiation of shoot, temperature-sensitive mutants, 815
germinating seedlings, regulation of *LOX1* gene, 385
GF14 proteins, five cDNAs in, 1459
light-grown *phyA* mutants, photoresponses, 141
microsomal ω-3 fatty acid desaturase, genomic nucleotide sequence, 767
myo-inositol 1-phosphate synthase, 1023
plasma membrane, putrescine channels, 921
plastid ω-3 fatty acid desaturase in, 1451
ribosomal protein S11 genes, 1027
stress-related genes in, ozone-induced expression, 1089
two abscisic acid response mutations, variable dominance of, 1203
Aspartate aminotransferase-P_1, gene from *Lupinus angustifolius*, 763
Aspartate transcarbamoylase, *pyrB1* and *pyrB2* genes, pea, 377
Aspartic proteinase, barley, vacuolar enzyme, processing of probarley lectin, 321
Astasia longa, plastid genome, 1443
ATP sulfurylase, cloning of cDNA, *Arabidopsis thaliana*, functional expression in yeast, 897
ATP synthase gene cluster, expression of, ribosome pause during, spinach chloroplasts, 1167
Atropa belladonna, species-dependent expression, hyoscyamine 6β-hydroxylase gene, pericycle, 483
Auxin
perception, *rolB*-transformed tobacco protoplasts, 1209
sensitivity of tobacco protoplasts, *rolB* gene, *Agrobacterium rhizogenes*, 563
Auxin-binding protein, maize, processing in the baculovirus expression system, 1049
Avena sativa (*see* Oat)

B

Bacteroids, free, acetylene reduction by symbiosomes, broad bean nodules, 555
Baculovirus expression system, maize auxin-binding protein processing in, 1049
Barley
aspartic proteinase, vacuolar enzyme, processing of probarley lectin, 321
chloroplasts, glutamine synthetase/glutamate synthase, 415
cis-acting gibberellin response complex,

high-pI α-amylase gene promoters, 151
field-grown, flag leaves, early light-inducible proteins in, 1217
leaves, excised, chlorophyll biosynthetic reactions during senescence, 1295
resistance, Russian wheat aphid, 1289
root, ion channels, xylem parenchyma, 799
Bean
binding of 2-carboxyarabinitol 1-phosphate, ribulose-1,5-bisphosphate carboxylase, 731
epicotyls, early gravi-electrical responses, 875
frequency of fluctuations in environmental stimuli, dependence, extent and direction of average stomatal response, 1007
role for stele in intertissue signaling, initiation of abscission, leaves, 341
salt-sensitive, sodium-chloride effects on nitrogen and ions, 1409
Beet, growth and photosynthesis, nitrogen source regulation, 1159
Beta vulgaris (*see* Beet)
Boron, localization in cell walls, association with pectin, squash, and tobacco, 681
Brassica napus (*see* Rape)
Brassica napus
leaf senescence, cDNA clones for genes, 839
mitochondrial chaperonin-60, full-length cDNA, 451
plastid chaperonin-60 α subunit, full-length cDNA, 453
root, glutamine synthetase, 757
Brassica oleracea (*see* Broccoli; Cauliflower)
Broad bean, nodules, acetylene reduction, symbiosomes and free bacteroids, 555
Broccoli, microheterogeneous cytosolic high-mobility group proteins, copurification and phosphorylation, casein kinase II, 911
Bromegrass, freezing tolerance and gene expression, abscisic acid metabolites, analogs, 823
Bromus inermis (*see* Bromegrass)
Bromus inermis, Leyss cell-suspension culture, abscisic acid-induced heat tolerance, 181

C

Calcium, intracellular, anaerobic gene expression and survival, corn, 369
Callose, synthesis and uridine diphosphate glucose metabolism, cultured pollen tubes, *Nicotiana alata*, 659
Carbohydrates, regulation of nitrate uptake, N demand, 3
Carbon, nitrogen reserve mobilization, alfalfa regrowth, 831
Carbonic anhydrase
activity, *Chlamydomonas reinhardtii* chloroplasts, 1197
cDNAs, *Arabidopsis thaliana*, 707
intracellular, *Chlamydomonas reinhardtii*, carbonic anhydrase-directed photoaffinity label, 133
nucleotide sequence of gene, *Arabidopsis thaliana*, 449
2-Carboxyarabinitol 1-phosphate, binding to ribulose-1,5-bisphosphate carboxylase, bean, 731
Carotenoid
biosynthesis, tomato fruit development, 405
light-stimulated biosynthesis, transformation of maize etioplasts, isopentenyl pyrophosphatase isomerase activity, 529
Carrot, metabolites of L-phosphinothricin, 159
Casein kinase II, copurification and phosphorylation, microheterogeneous cytosolic high-mobility group proteins, broccoli, 911
Castor bean
cytosolic enolase, full-length cDNA, 455
germination and leaf development, multiple forms, phospholipase D, 715
plasmid ω-3 fatty acid desaturase cDNA, 443
Catalase
expression, dividing and nondividing protoplasts, 1375
isozyme, cDNA clone, rice, 1015
Catharanthus roseus, suspension-cultured cells, phosphatidate kinase, 903
Cationic channels, guard cell tonoplast, *Allium cepa*, 999
Cauliflower, immunopurification and immunocharacterization, glucosinolate biosynthetic enzyme thiohydroximate *S*-glucosyltransferase, 425
Cellular control, oxygen diffusion, legume nodules, 1321
Cellulose, *in vitro* synthesis, 1
Cell wall
localization of boron, association with pectin, squash, and tobacco, 681
-localized lipid transfer protein, tissue-specific gene expression, *Arabidopsis*, 35
Phytophthora sojae glucan elicitor, wound-associated competency factors, proximal cell responses of soybean, 571
Chalcone synthase, mRNA and activity, dominant *I* alleles, yellow soybean seed coats, 739
Chaperonin-60
mitochondrial, full-length cDNA, *Brassica napus*, 451
proteins, rape plastid and mitochondria, multiple distinct polypeptides, 233
α subunit, full-length cDNA, *Brassica napus*, 453
Chara contraria, rhizoids, response to gravity, number of statoliths, 937
Chenopodium album (*see* Lambsquarter)
Chilling
induction of lipid phase changes, tomato fruit membranes, 305
maize seedling acclimation, differential gene expression, abscisic acid, 331
Chitinase, acidic class I, maize, two cDNA clones encoding, 1097
Chlamydomonas reinhardtii
chloroplasts of, carbonic anhydrase activity in, 1197
intracellular carbonic anhydrase, carbonic anhydrase-directed photoaffinity label, 133
n-limited, chloroplastic metabolism in, redox modulation effects, 1037, 1043
Chlorella vulgaris, high-light acclimation, mimicry, growth at low temperature, 535
Chlorophyll
biosynthetic reactions, during senescence, excised barley leaves, 1295
-porphyrin, cleavage, rapeseed, 545
Chlorophyll *a*/*b*-binding
integration of polypeptide into thylakoid membranes, stromal GTP requirement, pea and tomato, 295
polypeptide cDNAs, light-harvesting, *Amaranthus hypochondriacus*, 459
Chloroplasts
barley, metabolic control analysis, glutamine synthetase/glutamate synthase, 415
Chlamydomonas reinhardtii, carbonic anhydrase activity in, 1197
glyceraldehyde 3-phosphate dehydrogenase B subunit, light-responsive region of nuclear gene, *Arabidopsis thaliana*, 357
inner envelope K^+ channel, spinach, 955
metabolism, n-limited *Chlamydomonas reinhardtii*, redox modulation and, 1037, 1043
spinach, expression of large ATP synthase gene cluster in, 1167
Chromatography, affinity, with biotinylated fusicoccin, application in receptor isolation, 1281
Closterium, 19-kDa subunit, protoplast-release-inducing protein, 447
Clover, *Agrobacterium*-mediated transformation, 81
Cold
acclimation, genetically related deciduous and evergreen peach, 95
hardiness, glutathione reductase isozymes, red spruce, 205
hardiness-specific glutathione reductase isozymes, red spruce, 215
induction of *Arabidopsis Adh* gene, 1075
protection of mitochondria from irreversible chilling injury, maize seedling, 619
Compartmentation, subcellular, regulation of sterol content in membranes, sterol-overproducing tobacco mutants, 509
Corn
ADH1 null, hypoxic induction of anoxia tolerance, 61
anti-phytochrome immunoprecipitates, Pr-specific phytochrome phosphorylation, protein kinase, 243
DNA, protection from induction of UV radiation damage, flavonoids, 881
etioplasts, light-stimulated carotenoid biosynthesis, isopentenyl pyrophosphate isomerase, 529
frequency of fluctuations in environmental stimuli, dependence, extent and direction of average stomatal response, 1007
germinating seed, cloning, α-amylase cDNA, 759
K_ms for ATP, root H^+-ATPase, use of glucose-6-phosphate and hexokinase, 853
maize auxin-binding protein, baculovirus expression system, 1049
phospho*enol*pyruvate carboxylase gene, nitrogen-responding expression of, 1223
primary roots, proline accumulation, low water potentials, 981
primary root tip, nonvascular symplastic diffusion, sucrose, 19

5-*enol*-Pyruvyl-shikimate-3-phosphate synthase from, 1107
root, lysigenous aerenchyma formation, induction of enzymes, 861
seedling
acclimation to low-oxygen environment, improved cytoplasmic pH regulation, 651
anaerobic gene expression and survival, intracellular calcium, 369
different ages, hypoxia and anoxic stress, 53
protection of mitochondria from irreversible chilling injury, 619
two cDNA clones, encoding acidic class I chitinases, 1097
vivipary mutants, 3-hydroxy-3-methylglutaryl coenzyme A reductase, 119
Cotton
fiber development, α- and β-tubulin isotypes during, 1347
salt-tolerant, sodium-chloride effects on nitrogen and ions, 1409
Cotyledon, expansion, light-stimulated, *Arabidopsis thaliana*, 1433
Cucumber
hypocotyl segments, infected and elicited, defense responses, 1365
root, iron-deficiency stress responses in, 1133
Cucumis sativus (*see* Cucumber)
Cucurbita pepo (*see* Squash)
Cuticle, chemically induced mutation, *Sorghum bicolog*, 1239
Cyanobacteria, *Prochlorothrix hollandica*, light-dependent tyrosine phosphorylation, 629
Cyanoplasts, algae, class II aldolases in, 1393
Cytochrome *f*, response to nitrogen, rice leaves, 173
Cytochrome P450
bacterial, plant expression, activation of sulfonylurea pro-herbicide, 473
full-length cDNA from *Thlaspi arvense*, cloning and sequencing, 755
Cytokinin
-independent growth of transformed tobacco cells, *Agrobacterium tumefaciens* strains, lack of cytokinin biosynthesis gene, 989
peroxidase antagonized in *Spirodela polyrrhiza*, 497
Cytoplasm, improved pH regulation, acclimation to low-oxygen environment, root tips of whole maize seedlings, 651
Cytosol
algae, class II aldolases in, 1393
enolase from *Ricinus communis*, full-length cDNA, 455
high-mobility group proteins, phosphorylation by casein kinase II, broccoli, 911
nucleotide sequence, glutamine synthetase, *Brassica napus* root, 757
retention of photoinduction of enzymes, *aurea* tomato mutant, 643

D

Daucus carota (*see* Carrot)
Dehydration, induction of *Arabidopsis Adh* gene, 1075
Dehydrin, cold acclimation, genetically related deciduous and evergreen peach, 95
2±-Deoxymugineic acid, biosynthesis in wheat root, incorporation of label, methionine molecules, 607
Dihydroflavonol 4-reductase, gene, complementation, tomato *anthocyanin without* mutant, 491
3-Dimethylsulfoniopropionate, biosynthesis, *Wollastonia biflora*, 103
Dinitroaniline, chemically distinct classes of anti-mitotic herbicide, molecular modeling, same receptor site(s), 15
Diospyros kaki (*see* Persimmon)
Disease resistance, plant defense against pathogens, active oxygen species, 467
DNA
cloning, serine carboxypeptidases, rice grains, 1275
complementary
S-adenosyl-L-methionine:caffeic acid 3-*O*-methyltransferase, *Eucalyptus*, 749
5±-adenylylphosphosulfate kinase, *Arabidopsis thaliana*, 771
α-amylase, aleurone tissue, germinating maize seed, 759
ATP sulfurylase, cloning from *Arabidopsis thaliana*, functional expression in yeast, 897
carbonic anhydrase, *Arabidopsis thaliana*, 707
clone, endopolygalacturonase, apple, 1437
clone encoding rice catalase isozyme, 1015
clones encoding acidic class I chitinase, maize, 1097
clones for genes expressed during leaf senescence, *Brassica napus*, 839
Dunaliella tertiolecta, cytosol ribosomal protein S11, 1447
ω-3 fatty acid desaturase cDNA, *Ricinus communis*, 443
five, encoding *Arabidopsis* GF14 proteins, 1459
imidazoleglycerolphosphate dehydratase, cDNAs, 579
19-kDa subunit of protoplast-release-inducing protein, *Closterium*, 447
light-harvesting chlorophyll *a*/*b*-binding polypeptide, *Amaranthus hypochondriacus*, 459
molecular characterization, small GTP-binding protein, *SYPT* in soybean, 765
nucleotide sequence, 60S ribosomal protein L27 gene, potato, 1025
peach endopolygalaturonase, melting and nonmelting cultivars, 225
pea fragment coding for thioredoxin *m*, cloning and sequencing, 1021
plastid ω-6 fatty acid desaturase, cloning of *Arabidopsis thaliana*, cyanobacterium, 635
pyrB1 and *pyrB2* genes, aspartate transcarbamoylase, pea, 377
rice acidic ribosomal phosphoprotein P0 cDNA, nucleotide sequence, 753
sequence, plastidic phosphoglucomutase from, 1439
spinach 70-kDa heat shock cognate, 457
tomato *anthocyanin without* mutant, dihydroflavonol 4-reductase gene, 491
transmembrane protein, nucleotide sequence of, *Arabidopsis thaliana*, 1441
complementary, full-length
Brassica napus mitochondrial chaperonin-60, 451
Brassica napus plastid chaperonin-60 α subunit, 453
cytochrome P-450, *Thlaspi arvense*, 755
cytosolic enolase, *Ricinus communis*, 455
corn, protection from induction of UV radiation damage, flavonoids, 881
DNA primase, wheat, 69
Dormancy, potato microtuber, role, endogenous abscisic acid, 891
Dunaliella acidophila, plasma membrane hydrogen-ATPase, proteolytic activation and phosphorylation of, 1125
Dunaliella tertiolecta, cytosol ribosomal protein S11, cDNA for, 1447

E

Early light-inducible proteins, expression, flag leaves of field-grown barley, 1217
Echinochloa crus-pavonis, aerobic priming effects, response to anaerobic stress, 1149
Electrons
regulation of transport in *Panicum*, response to changing irradiance, O_2 levels, 349
transport system, mitochondria, nuclear gene expression in tobacco, 867
Endo-1,4-β-glucanase, potential substrates, ripening tomatoes, 965
Endophyte, nitrogen-fixing, sugarcane stems, 1139
Endopolygalaturonase, cDNA and mRNA, melting and nonmelting peach cultivars, 225
Enolase, cytosolic, full-length cDNA, *Ricinus communis*, 455
Environment, frequency of fluctuations in stimuli, direction of stomatal response, corn and bean, 1007
Epicotyls, bean, early gravi-electrical responses, 875
Ethylene, increase in glutamine synthetase induced by, mRNA levels, rubber plant latex cells, 127
Etioplasts, maize, light-stimulated carotenoid biosynthesis, isopentenyl pyrophosphate isomerase, 529
Eucalyptus, *S*-adenosyl-L-methionine:caffeic acid 3-*O*-methyltransferase cDNA, 749

F

Fatty acid desaturase, plastid ω-6, *Arabidopsis thaliana* and expression in cyanobacterium, 635
ω-3 Fatty acid desaturase
cDNA, *Ricinus communis*, 443
genomic nucleotide sequence, microsomes, *Arabidopsis thaliana*, 767
plastid, *Arabidopsis thaliana*, 1451
Ferredoxin, oxygen and, cleavage of chlorophyll-porphyrin, 545
Fescue, growing leaf blade, nitrogen use, 191
Festuca arundinacea (*see* Fescue)
Flavonoids, protection of maize DNA, induction of UV radiation damage, 881
Flowering, genetic regulation of development, *Sorghum bicolor*, 941
Freezing
tolerance and gene expression, abscisic acid metabolites and analogs, bromegrass, 823
tolerance-associated protein family, nucleotide sequence, wheat, 1017

Fucus, photopolarization of zygote by blue light, plasma membrane redox chain, 519
Fusicoccin, biotinylated, application in receptor isolation, 1281

G

β-Galactosidase, persimmon fruit, N-terminal amino acid sequence, 975
Gametophyte, self-incompatibility, self/nonself discrimination, sexual reproduction, 461
Gene
acetyl-coenzyme A carboxylase, structure and expression, *Arabidopsis thaliana*, 611
S-adenosylmethionine synthetase, characterization in rice, 1463
aluminum-induced, wheat roots, 1455
anaerobic expression, intracellular calcium, survival of maize seedlings, 369
aspartate aminotransferase-P_1, *Lupinus angustifolius*, 763
basic 7S globulin, nucleotide sequence, soybean, 1019
cDNA clones, leaf senescence, *Brassica napus*, 839
cytokinin biosynthesis, cell-autonomous cytokinin-independent growth, transformed tobacco cells, 989
differential expression, chilling-acclimated maize seedlings, abscisic acid, 331
dihydroflavonol 4-reductase gene, tomato *anthocyanin without* mutant, complementation, 491
Enod12, differential regulation during nodule development, nod factors and *Rhizobium* invasion in alfalfa, 585
expression and freezing tolerance, abscisic acid metabolites and analogs, bromegrass, 823
hyoscyamine 6β-hydroxylase, pericycle, *Atropa belladonna* and *Hyoscyamus niger*, 483
LOX1, regulation in germinating seedlings, *Arabidopsis thaliana*, 385
NPR, positive regulation by abscisic acid, *Lemna gibba*, 949
nuclear
B subunit of chloroplast glyceraldehyde 3-phosphate dehydrogenase, light-responsive region of *Arabidopsis thaliana*, 349
mitochondrial electron transport, tobacco, 867
nuclear expression, plastids role in, 1355
photosystem II, characterization and expression, *Mesembryanthemum crystallinum*, 761
pyrB1 and *pyrB2*, aspartate transcarbamoylase, pea, 377
ribosomal protein S11, *Arabidopsis* and soybean, 1027
rolB, auxin sensitivity of tobacco protoplasts, *Agrobacterium rhizogenes*, 563
60S ribosomal protein L27, nucleotide sequence of cDNA clone, potato, 1025
SYPT, cDNA encoding small GTP-binding protein, molecular characterization, 765
system, plant mitochondrion, 775
tissue-specific expression
carotenoid biosynthesis, tomato fruit development, 405
cell wall-localized lipid transfer protein, *Arabidopsis*, 35
Genome, plant mitochondrion, as a genetic system, 775
Germination
Arabidopsis seedlings, regulation of *LOX1* gene, 385
leaf development and, multiple forms of phospholipase D, castor bean, 715
maize seed, cloning, α-amylase cDNA from aleurone tissue, 759
Gibberellin
cis-acting response complex, high-pI α-amylase gene promoters, barley, 151
genetic regulation of development, *Sorghum bicolor*, 941
Globulin, basic 7S gene, nucleotide sequence, soybean, 1019
Glucan, *Phytophthora sojae* elicitor, wound-associated competency factors, proximal cell responses of soybean, 571
β-1,4-Glucans, *in vitro* cellulose synthesis, 1
Glucose-6-phosphate, H^+-ATPase, K_ms for ATP, corn root, 853
Glucose-6-phosphate dehydrogenase, activation, photosynthetic supply of electrons and, 1037
Glucosinolate, biosynthetic enzyme thiohydroximate *S*-glucosyltransferase, immunopurification, immunocharacterization, 425
Glufosinate, metabolites of L-phosphinothricin, tobacco and carrot, 159
Glutamine synthetase
Brassica napus root, 757
-glutamate synthase, metabolic control analysis, barley chloroplasts, 415
Glutathione reductase
cold hardiness-specific isozymes, red spruce, 215
isozymes, state of cold hardiness, red spruce, 205
Glyceraldehyde 3-phosphate dehydrogenase, chloroplast B subunit, light-responsive region, *Arabidopsis thaliana*, 357
Glycoprotein, salt-responsive 24-kilodalton, *Mesembryanthemum crystallinum*, 1179
Glycyrrhiza echinata, Cyt P450 licodione synthase, 1427
Glyphosate, surfactant-increased uptake, lambsquarter leaves, 1419
Gossypium hirsutum (*see* Cotton)
Grapevine, dividing and nondividing protoplasts, catalase expression in, 1375
Gravitropism
early gravi-electrical responses, bean epicotyls, 875
response, number of statoliths, *Chara* rhizoids, 937
Growth regulators, sensitivity thresholds and variable time scales in, 1029
GTP-binding protein, molecular characterization of cDNA, *SYPT* in soybean, 765
Guanosine triphosphate, stromal requirement for integration, chlorophyll *a*/*b*-binding polypeptide into thylakoid membranes, pea and tomato, 295
Guard cells, tonoplast of *Allium cepa*, cationic channel, 999

H

Heat, abscisic acid-induced tolerance, *Bromus inermis* Leyss cell-suspension culture, 181
Heat shock, 70-kDa cognate, cDNA clone, spinach, 457
Heat-shock protein, low molecular mass, localized in higher plant mitochondria, 1255
Herbicides
amiprophos-methyl, inhibition of high-affinity oryzalin binding, tobacco tubulin, 309
anti-mitotic, distinct classes but binding to same receptor site(s), molecular modeling, 15
L-phosphinothricin, metabolites, tobacco and carrot, 159
sulfonylurea pro-herbicide, plant expression, bacterial cytochrome P450, 473
Heteromeles arbutifolia, leaf, estimation of dark respiration in the light, 167
Hevea brasiliensis (*see* Rubber plant)
Hexokinase, H^+-ATPase, K_ms for ATP, corn root, 853
High-mobility group proteins, microheterogeneous cytosolic, copurification and phosphorylation, casein kinase II, 911
Hordeum vulgare (*see* Barley)
Hydrogen-ATPase
immunolocalization in plasma membrane, minor veins of *Vicia faba*, relation to phloem loading, 691
plasma membrane, *Dunaliella acidophila* activation, 1125
Hydrogen peroxide, protection of mitochondria from irreversible chilling injury, maize seedling, 619
3-Hydroxy-3-methylglutaryl coenzyme A reductase, endosperm of maize *vivipary* mutants, 119
Hyoscyamus niger, species-dependent expression, hyoscyamine 6β-hydroxylase gene, pericycle, 483
Hypocotyl segments, cucumber, infected and elicited, defense responses in, 1365
Hypoxia
anoxic stress and, different ages, corn seedling, 53
induction of anoxia tolerance in roots, *Adh1* null *Zea mays*, 61
induction of enzymes, lysigenous aerenchyma formation, corn root, 861

I

Imidazoleglycerolphosphate dehydratase, cDNAs, *Arabidopsis thaliana*, 579
myo-Inositol 1-phosphate synthase, *Arabidopsis thaliana*, 1023
Iron, deficiency, stress responses, cucumber root, 1133
Iron superoxide dismutase, lack in *Synechococcus* mutant, acclimation, photosynthetic apparatus, 287
Irradiance
changing levels, regulation of electron transport, *Panicum*, 349
growth, acclimation of photosynthetic apparatus, *Synechococcus* mutant lacking iron superoxide dismutase, 287
Isoelectric point, high-pI α-amylase gene product, *cis*-acting gibberellin response complex, barley, 151
Isopentenyl pyrophosphate isomerase, light-stimulated carotenoid biosynthesis, transformation, maize etioplasts, 529
Isoprene, emission, velvet bean leaves, 279

L

Lambsquarter, leaves, surfactant-increased glyphosate uptake, 1419
Latex, ethylene-induced increase, glutamine synthetase and mRNA levels, rubber plant latex cells, 127
Leaf
Ajuga reptans, metabolism of raffinose family oligosaccharides, 1335
barley, excised, chlorophyll biosynthetic reactions during senescence, 1295
bean, role for stele in intertissue signaling, initiation of abscission, 341
castor bean, development and germination, multiple forms of phospholipase D, 715
fescue, growing blade, nitrogen use, 191
flat, field-grown barley, early light-inducible proteins in, 1217
lambsquarter, surfactant-increased glyphosate uptake, 1419
regulation of nitrate uptake, N demand, 3
rice, ribulose-1,5-bisphosphate carboxylase response to nitrogen, photosynthesis, 173
senescence, cDNA clones for genes, *Brassica napus*, 839
soybean, ribulose 1,5-bisphosphate carboxylase/oxygenase complex protein accumulation, 1445
two woody species, estimation of dark respiration in the light, 167
velvet bean, isoprene emission, 279
wheat, etiolated protoplasts, phosphorylation of renatured protein and modulation by red and blue light, 253
Wollastonia biflora, biosynthesis of 3-dimethylsulfoniopropionate, 103
Lectin, probarley, aspartic proteinase as vacuolar enzyme, barley, 321
Legume
nodules, oxygen diffusion in, role of infected cells, 1321
woody species, seasonal acclimation of stem photosynthesis, 1385
Lemna gibba, positive regulation by abscisic acid, *NPR* genes, 949
Lepechinia fragans, leaf, estimation of dark respiration in the light, 167
Leyss cell, -suspension culture of *Bromus inermis*, abscisic acid-induced heat tolerance, 181
Licodione synthase, Cyt P450, cultured *Glycyrrhiza echinata* cells, 1427
Light
blue, photopolarization of *Fucus* zygote, plasma membrane redox chain, 519
cotyledon expansion stimulated by, *Arabidopsis thaliana*, 1433
-dependent tyrosine phosphorylation, *Prochlorothrix hollandica*, 629
-grown *phyA* mutants, photoresponses, *Arabidopsis thaliana*, 141
-harvesting chlorophyll *a/b*-binding polypeptide cDNAs, *Amaranthus hypochondriacus*, 459
high, acclimation in *Chlorella vulgaris*, mimicry of growth at low temperature, 535
leaves of two woody species, estimation, dark respiration, 167
red and blue, phosphorylation of renatured protein, etiolated wheat leaf protoplasts, 253
-responsive region of nuclear gene, glyceraldehyde 3-phosphate dehydrogenase B subunit, *Arabidopsis thaliana*, 357
-stimulated carotenoid biosynthesis, transformation of maize etioplasts, isopentenyl pyrophosphatase isomerase activity, 529
Limnobium stoloniferum, root hairs, redox reactions, K^+ channels in plasma membrane, 927
Lipids
cell wall-localized transfer protein, tissue-specific gene expression, *Arabidopsis*, 35
phase changes, induction by chilling injury, tomato fruit membranes
Lipoxygenase, expression in wounded potato tubers, 269
Littorella uniflora, rhizosphere, microsensor analysis, oxygen, 847
Locus japonicus, cDNA, heterotrimeric G-protein, 1453
Lupinus angustifolius, aspartate aminotransferase-P_1 gene, 763
Lycopersicon esculentum (*see* Tomato)
Lycopersicon peruvianum, cloning and nucleotide sequence, two S-RNases, 751

M

Maize (*see* Corn)
Medicago sativa (*see* Alfalfa)
Medicago truncatula, PRP1 and PRP2, 445
Membranes, regulation of sterol content, subcellular compartmentation of steryl-esters, sterol-overproducing tobacco mutants, 509
Mesembryanthemum crystallinum
characterization and expression, photosystem II genes, 761
salt-responsive 24-kilodalton glycoprotein in, 1179
Mesophyll, *Zinnia elegans*, cell expansion and tracheary element differentiation, regulation by extracellular pH, 699
Metallothionein, leaf senescence in *Brassica napus*, cDNA clones for genes, 839
Methionine, incorporation of label, biosynthesis of 2±-deoxymugineic acid, wheat root, 607
Methylammonium, transport analog for ammonium, tomato, 435
Methyl jasmonate, pretreatment of parsley suspension cultures, elicitation, activated oxygen species, 89
Microsensor, analysis of oxygen, rhizosphere, *Littorella uniflora*, 847
Microsomes, ω-3 fatty acid desaturase, genomic nucleotide sequence, *Arabidopsis thaliana*, 767
Microtubules, anti-mitotic herbicide, chemically distinct classes, molecular modeling and same receptor site(s), 15
Mitochondria
chaperonin-60, full-length cDNA, *Brassica napus*, 451
chaperonin-60 proteins, rape plastid and, multiple distinct polypeptides, 233
electron transport regulation, nuclear gene expression, tobacco, 867
as a genetic system, 775
higher plant, heat-shock protein localized in, 1255
pea, phosphate transporter, 47
potato, tRNA processing activities, 1247
protection from irreversible chilling injury, maize seedling, 619
Mucuna (*see* Velvet bean)
Mung bean, seedling, mitochondria of, phosphatidylglycerol in, 1269
Mutants
corn *vivipary*, 3-hydroxy-3-methylglutaryl coenzyme A reductase, 119
temperature-sensitive, defects in redifferentiation of shoot, *Arabidopsis thaliana*, 815

N

Nicotiana alata, cultured pollen tubes, uridine diphosphate glucose metabolism, callose synthesis, 659
Nicotiana tabacum (*see* Tobacco)
Nitrate
photosynthetic assimilation, oxidative pentose phosphate pathway during, 1043
uptake, regulation, N demand, 3
Nitrogen
demand, regulation of nitrate uptake, 3
fertilizers, sugarcane stems, 1139
isoprene emission, velvet bean leaves, 279
reserve mobilization, alfalfa regrowth, 831
responses of ribulose-1,5-bisphosphate carboxylase, relationship to photosynthesis, 173
source regulation, growth and photosynthesis in beets, 1159
starvation, induction of enzymes, lysigenous aerenchyma formation in corn root, 861
use, growing leaf blade, fescue, 191
Nodulation, factors, root hair deformation activity, *Vicia sativa*, 787
Nucleotides
genomic sequence, gene encoding microsomal ω-3 fatty acid desaturase, *Arabidopsis thaliana*, 767
sequence
basic 7S globulin gene, soybean, 1019
freezing tolerance-associated protein family, wheat, 1017
sequence of cDNA clone, 60S ribosomal protein L27 gene, potato, 1025
sequence of cytosolic isoform, glutamine synthetase, *Brassica napus* root, 757
sequence of gene encoding carbonic anhydrase, *Arabidopsis thaliana*, 449
sequence of rice acidic ribosomal phosphoprotein P0 cDNA, 753
sequence of two S-RNases, *Lycopersicon peruvianum*, 751

O

Oat, seeds, membrane-bound UDP-glucose:sterol β-D-glucosyltransferase in, 1067
Oligosaccharides, raffinose family, metabolism, *Ajuga reptan* leaves, 1335
Organogenesis, temperature-sensitive mutants, defects in redifferentiation of shoot, *Arabidopsis thaliana*, 815
Oryzalin, high-affinity binding to plant tubulin, competitive inhibition by amiprophos-methyl, tobacco, 309
Oryza sativa (*see* Rice)
Oxalate, acetylene reduction, symbiosomes and free bacteroids, broad bean nodules, 555
Oxygen
activated species

plant defense against pathogens, 467
pretreatment of parsley suspension cultures, methyl jasmonate, 89
changing levels, regulation of electron transport, *Panicum*, 349
diffusion, legume nodules, role of infected cells, 1321
ferredoxin and, cleavage of chlorophyllporphyrin, 545
low, acclimation and improved cytoplasmic pH regulation, maize seedling, 651
microsensor analysis, rhizosphere, *Littorella uniflora*, 847
photosynthetic evolution, heat inactivation in *Synechococcus*, 1313
Ozone, expression of stress-related genes, *Arabidopsis thaliana*, 1089

P

Panicum, C_3/C_3-C_4/C_4 species, regulation of electron transport, photosystems I and II, 349
Parenchyma, xylem, ion channels, barley root, 799
Parsley, suspension pretreated with methyl jasmonate, elicitation, activated oxygen species, 89
Pathogens, plant defense, active oxygen species, 467
Pea
cDNA fragment coding for thioredoxin *m*, cloning and sequencing, 1021
guard cell protoplasts, cyanide-resistant alternative pathway, 1263
mitochondria, phosphate transporter, 47
pyrB1 and *pyrB2* genes, aspartate transcarbamoylase, 377
stromal GTP requirement, integration, chlorophyll *a*/*b*-binding polypeptide into thylakoid membranes, 295
Peach
endopolygalacturonase cDNA and mRNA, melting and nonmelting cultivars, 225
genetically related deciduous and evergreen, cold acclimation, 95
Pectin, localization of boron in cell walls, squash and tobacco, 681
Pectin methylesterase, isoforms in tomato tissues, 199
Pericycle, species-dependent expression, hyoscyamine 6β-hydroxylase gene, *Atropa belladonna* and *Hyoscyamus niger*, 483
Peroxidase, antagonism by cytokinin, abscisic acid induction, *Spirodela polyrrhiza*, 497
Persimmon, fruit β-galactosidase, N-terminal amino acid sequence, 975
Petroselinum crispum (*see* Parsley)
pH
cytoplasmic, acclimation to low-oxygen environment, root tips of whole maize seedlings, 651
extracellular, cell expansion and tracheary element differentiation, mesophyll cultures of *Zinnia elegans*, 699
Phaseolus vulgaris (*see* Bean)
Phloem
loading, immunolocalization of plasma membrane H^+-ATPase, minor veins of *Vicia faba*, 691
regulation of nitrate uptake, N demand, 3
Phosphate, transporter, pea mitochondria, 47
Phosphatidate kinase, suspension-cultured *Catharanthus roseus* cells, 903
Phosphatidylglycerol, biosynthesis, mitochondria of mung bean seedling, 1269
L-Phosphinothricin, metabolites, tobacco and carrot, 159
Phospho*enol*pyruvate carboxylase gene, nitrogen-responding expression, maize, 1223
Phospholipase D, multiple forms, germination and leaf development, castor bean, 715
Phosphoribulosekinase, activation, photosynthetic supply of electrons and, 1037
Phosphoric amide, amiprophos-methyl, inhibition of high-affinity oryzalin binding, tobacco tubulin, 309
Phosphorothioamidate, chemically distinct classes of anti-mitotic herbicide, molecular modeling, same receptor site(s), 15
Photoaffinity, carbonic anhydrase-directed label, intracellular carbonic anhydrase, *Chlamydomonas reinhardtii*, 133
Photoinduction, retention, cytosolic enzymes, *aurea* tomato mutant, 643
Photon flux density, photosynthetic induction state, soybean, 1115
Photons, isoprene emission, velvet bean leaves, 279
Photosynthesis
acclimation to growth irradiance, mutant strain of *Synechococcus* lacking iron superoxide dismutase, 287
nitrogen source regulation of, beets, 1159
responses of ribulose-1,5-bisphosphate carboxylase, leaf nitrogen, rice, 173
rice, growth temperature effects, 1231
stem, seasonal acclimation, woody legume species, 1385
Photosynthetic induction state, photon flux density regulation of, soybean, 1115
Photosystem II, genes from *Mesembryanthemum crystallinum*, characterization and expression, 761
Phytochrome
genetic regulation of development, *Sorghum bicolor*, 941
negative regulation in *Lemna gibba*, *NPR* genes, 949
Pr-specific phosphorylation, protein kinase, anti-phytochrome maize immunoprecipitates, 243
retention of photoinduction, cytosolic enzymes, *aurea* tomato mutant, 643
Phytochrome A, light-grown *phyA* mutants, photoresponses, *Arabidopsis thaliana*, 141
Phytophthora sojae, wall glucan elicitor, wound-associated competency factors, proximal cell responses of soybean, 571
Picea rubens (*see* Spruce, red)
Pisum sativum (*see* Pea)
Plant Gene Register
S-adenosylmethionine synthetase gene, rice, 1463
Amaranthus hypochondriacus, light harvesting chlorophyll *a*/*b*-binding polypeptide cDNAs, 459
Arabidopsis thaliana myo-inositol 1-phosphate synthase, 1023
aspartate aminotransferase-P_1 gene, *Lupinus angustifolius*, 763
cDNA
Dunaliella tertiolecta cytosol ribosomal protein S11, 1447
encoding *Arabidopsis* calcium-dependent protein kinase, 1461
encoding *Arabidopsis* GF14 proteins, 1459
encoding 19-kDa subunit, protoplast-release-inducing protein, *Closterium*, 447
encoding *S*-adenosyl-L-methionine: caffeic acid 3-*O*-methyltransferase, *Eucalyptus*, 749
cDNA clone
5±-adenylylphosphosulfate kinase, *Arabidopsis thaliana*, 771
endopolygalacturonase, apple, 1437
rice catalase isozyme, 1015
spinach 70-kDa heat-shock cognate, 457
cDNA sequence, plastidic phosphoglucomutase, spinach, 1439
cloning and nucleotide sequence, S-RNases, *Lycopersicon peruvianum*, 751
cloning and sequencing
full-length cDNA that encodes cytochrome P-450, *Thlaspi arvense*, 755
pea cDNA fragment, thioredoxin *m*, 1021
cloning of α-amylase cDNA, aleurone tissue, germinating maize seed, 759
ω-3 fatty acid desaturase, *Arabidopsis thaliana*, 1451
full-length cDNA
Brassica napus mitochondrial chaperonin-60, 451
Brassica napus plastid chaperonin-60 α subunit, 453
cytosolic enolase, *Ricinus communis*, 455
genomic nucleotide sequence, microsomal ω-3 fatty acid desaturase, *Arabidopsis thaliana*, 767
glutamine synthetase, *Brassica napus* root, 757
Locus japonicus, cDNA encoding heterotrimeric G-protein, 1453
molecular characterization of cDNA, small GTP-binding protein, *SYPT* in soybean, 765
nucleotide sequence
basic 7S globulin gene, soybean, 1019
carbonic anhydrase, *Arabidopsis thaliana*, 449
cDNA clone, 60S ribosomal protein L27 gene from potato, 1025
freezing tolerance-associated protein family, wheat, 1017
rice acidic ribosomal phosphoprotein P0 cDNA, 753
transmembrane protein cDNA, *Arabidopsis thaliana*, 1441
photosystem II genes, *Mesembryanthemum crystallinum*, 761
plastid ribosomal protein genes, nonphotosynthetic flagellate *Atasia longa*, 1443
PRP1 and PRP2, *Medicago truncatula*, 445
ribosomal protein S11 genes, *Arabidopsis* and soybean, 1027
ribulose 1,5-bisphosphate carboxylase/oxygenase complex protein, accumulation, soybean leaves, 1445
Ricinus communis, plasmid ω-3 fatty acid desaturase cDNA, 443
tomato fruit homologs, 14–3–3 mammalian brain proteins, 1457

wheat roots, aluminum in, genes induced by, 1455
Plasma membrane
Arabidopsis thaliana, putrescine channels, 921
immunolocalization of H^+-ATPase, minor veins of *Vicia faba*, relation of phloem loading, 691
Limnobium stoloniferum root hairs, redox reactions, K^+ channels, 927
phosphatidate kinase, suspension-cultured *Catharanthus roseus* cells, 903
redox chain, photopolarization of *Fucus* zygote, blue light, 519
Plasmids, ω-3 fatty acid desaturase cDNA, *Ricinus communis*, 443
Plastid
chaperonin-60 α subunit, full-length cDNA, *Brassica napus*, 453
rape, mitochondrial chaperonin-60 proteins and, multiple distinct polypeptides, 233
role, nuclear gene expression, 1355
Pollen, tubes of *Nicotiana alata*, uridine diphosphate glucose metabolism, callose synthesis, 659
Polygalacturonase isoenzyme 1, differential expression, tomato fruit, 1189
Polypeptides
abscisic acid-induced heat tolerance, *Bromus inermis* Leyss cell-suspension culture, 181
chlorophyll *a/b*-binding, integration into thylakoid membranes, pea and tomato, 295
light-harvesting chlorophyll *a/b*-binding, cDNAs, *Amaranthus hypochondriacus*, 459
rape plastid and mitochondrial chaperonin-60, 233
Polyphenol oxidase, import, targeting, and processing, tomato, 1301
Porphyrin, -chlorophyll, cleavage, rapeseed, 545
Potassium channels
chloroplast inner envelope, spinach, 955
inward rectifying, root hairs of wheat, 1399
redox reactions, plasma membrane, *Limnobium stoloniferum* root hairs, 927
Potato
microtuber dormancy, role, endogenous abscisic acid, 891
mitochondria, tRNA processing activities, 1247
ocs-like bZip-binding elements, differential strength, bidirectional *mas*1′2′, 259
60S ribosomal protein L27 gene, nucleotide sequence of cDNA clone, 1025
starch phosphorylation, *de novo* biosynthesis of starch, 111
wounded tubers, expression of lipoxygenase, 269
Prochlorothrix hollandica, light-dependent tyrosine phosphorylation, 629
Proline
accumulation, low water potentials, maize primary roots, 981
-rich proteins PRP1 and PRP2, *Medicago truncatula*, 445
Proteinase, inhibitor synthesis, induction by wounding and systemin, modulation of systemic signaling in tomato, 725
Protein kinase, Pr-specific phytochrome phosphorylation, anti-phytochrome maize immunoprecipitates, 243
Proteolipids, vesicles, phosphate transporter, pea mitochondria, 47
Protoplasts
dividing and nondividing, catalase expression in, 1375
etiolated wheat leaf, phosphorylation of renatured protein, modulation by red and blue light, 253
guard cell, cyanide-resistant alternative pathway, pea, 1263
ion channels in xylem parenchyma, barley root, 799
-release-inducing protein from *Closterium*, 19-kDa subunit, 447
tobacco
auxin sensitivity, *rolB* gene of *Agrobacterium rhizogenes*, 563
rolB-transformed, auxin perception in, 1209
Prunus persica (*see* Peach)
Putrescine, channels in plasma membrane, *Arabidopsis thaliana*, 921
5-*enol*-Pyruvyl-shikimate-3-phosphate synthase, *Zea mays* cultured cells, 1107

R

Rape
cleavage of chlorophyll-porphyrin, requirement, reduced ferredoxin and oxygen, 545
plastid and mitochondrial chaperonin-60 proteins, multiple distinct polypeptides, 233
Receptors, chemically distinct classes of antimitotic herbicide, molecular modeling, 15
Redox modulation, coordination of chloroplastic metabolism, n-limited *Chlamydomonas reinhardtii*, 1037, 1043
Reproduction, sexual, gametophytic self-incompatibility, self/nonself discrimination, 461
Respiration
dark, estimation of, light in leaves of two woody species, 167
molecular biology, alternative oxidase, 781
Rhizobium, invasion and nod factors, differential regulation during nodule development, alfalfa *Enod12* genes, 585
Rhizoids, *Chara*, response to gravity, number of statoliths, 937
Rhizosphere, *Littorella uniflora*, microsensor analysis, oxygen, 847
Ribulose-1,5-bisphosphate carboxylase
binding of 2-carboxyarabinitol 1-phosphate, bean, 731
response to nitrogen, rice leaves, 173
Ribulose 1,5-bisphosphate carboxylase/oxygenase complex protein, accumulation, soybean leaves, 1445
Rice
acidic ribosomal phosphoprotein P0 cDNA, nucleotide sequence, 753
anthocyanin production, ultraviolet-B-responsive, 1059
catalase isozyme, cDNA clone, 1015
grains, DNA cloning of serine carboxypeptidases, 1275
leaf, ribulose-1,5-bisphosphate carboxylase response to nitrogen, photosynthesis, 173
photosynthesis, growth temperature effects, 1231
S-adenosylmethionine synthetase gene, characterization of
Ricinus communis (*see* Castor bean)
RNA
messenger
chalcone synthase, dominant *I* alleles, yellow soybean seed coats, 739
ethylene-induced increase, glutamine synthetase and mRNA levels, rubber plant latex cells, 127
hypoxic and anoxic stress, different ages, corn seedling, 53
peach endopolygalaturonase, melting and nonmelting peach cultivars, 225
processing activities, potato mitochondria, 1247
wheat DNA primase, 69
Root
barley, xylem parenchyma, barley root, 799
Brassica napus, glutamine synthetase, 757
corn
H^+-ATPase, K_ms for ATP, 853
lysigenous aerenchyma formation, induction of enzymes, 861
nonvascular symplastic diffusion, sucrose, 19
proline accumulation, low water potentials, 981
cucumber, iron-deficiency stress responses in, 1133
Limnobium stoloniferum hairs, redox reactions, K^+ channels in plasma membrane, 927
tips of whole maize seedlings, acclimation of low-oxygen environment, improved cytoplasmic pH regulation, 651
Vicia sativa, hair deformation, nodulation factors and their fate, 787
wheat
aluminum, genes induced by, 1455
2±-deoxymugineic acid biosynthesis, incorporation of label, 607
Rubisco, nitrogen use, growing leaf blade, fescue, 191
Russian wheat aphid, resistance to, barley, 1289

S

Saccharum officinarum (*see* Sugarcane)
Salt, passageways into xylem vessels, barley root, 799
Sanguinaria canadensis, S-Adenosyl-L-methionine:tetrahydroberberine-*cis*-*N* methyltransferase, isolation from suspension cultures, 395
Satiety, regulation of nitrate uptake, N demand, 3
Seed
corn
endosperm *vivipary* mutants, 3-hydroxy-3-methylglutaryl coenzyme A reductase, 119
germination and cloning of α-amylase cDNA, 759
Echinochloa crus-pavonis, anaerobic priming of, 1149
soybean, yellow, coats with dominant *I* alleles, chalcone synthase mRNA, 739
Seedling
Arabidopsis thaliana, germination, regulation of *LOX1* gene, 385
corn
acclimation to low-oxygen environment,

improved cytoplasmic pH regulation, 651
anaerobic gene expression and survival, intracellular calcium, 369
chilling acclimation, differential gene expression and abscisic acid, 331
different ages, hypoxia and anoxic stress, 53
maize, protection of mitochondria from irreversible chilling injury, 619
mung bean, mitochondria of, phosphatidylglycerol in, 1269
rice cultivars, anthocyanin production in, 1059
Self-incompatibility, gametophytic, self/nonself discrimination, sexual reproduction, 461
Senescence, leaf, cDNA clones for genes, *Brassica napus*, 839
Sensitivity thresholds, variable time scales and, plant hormone action, 1029
Serine carboxypeptidases, DNA cloning of, rice grains, 1275
Shoot, *Arabidopsis thaliana*, temperature-sensitive mutants, defects in redifferentiation, 815
Sodium-chloride, nitrogen and ions with, bean and cotton, 1409
Solanum tuberosum (*see* Potato)
Sorghum bicolor
cuticle proper, induced mutation affecting, 1239
genetic regulation of development, 941
Soybean
basic 7S globulin gene, nucleotide sequence, 1019
leaves, ribulose 1,5-bisphosphate carboxylase/oxygenase complex protein accumulation, 1445
photosynthetic induction state, photon flux density regulation of, 1115
responses to *Phytophthora sojae* wall glucan elicitor, wound-associated competency factors, 571
ribosomal protein S11 genes, 1027
seed coats with dominant *I* alleles, chalcone synthase mRNA, 739
small GTP-binding protein, molecular characterization of cDNA, 765
Spinach
chloroplasts
expression of large ATP synthase gene cluster in, 1167
inner envelope K^+ channel, 955
70-kD heat-shock cognate, cDNA clone, 457
plastidic phosphoglucomutase from, cDNA sequence for, 1439
Spinacia oleracea (*see* Spinach)
Spirodela polyrrhiza, antagonism by cytokinin, abscisic acid induction, peroxidase, 497
Spruce, red
cold hardiness-specific glutathione reductase isozymes, 215
glutathione reductase isozymes, state of cold hardiness, 205
Squash, localization of boron in cell walls, association with pectin, 681
S-RNases, cloning and nucleotide sequence, *Lycopersicon peruvianum*, 751
Starch, phosphorylation on potato tubers, de novo biosynthesis of starch, 111
Statoliths, number of, response to gravity, *Chara* rhizoids, 937
Stele, intertissue signaling, initiation of abscission, bean leaves, 341
Stem
photosynthesis, seasonal acclimation, woody legume species, 1385
sugarcane, nitrogen-fixing endophyte of, 1139
Sterol, regulation in membranes by subcellular compartmentation, steryl-esters, sterol-overproducing tobacco mutants, 509
Stomata, bean and corn, frequency of fluctuations in environmental stimuli, 1007
Streptomyces griseolus, bacterial cytochrome P450, plant expression, activation of sulfonylurea pro-herbicide, 473
Stress
abscisic acid-induced heat tolerance, *Bromus inermis* Leyss cell-suspension culture, 181
anaerobic, *Echinochloa crus-pavonis* response to, 1149
hypoxic and anoxic, different ages, corn seedling, 53
iron-deficiency responses, cucumber root, 1133
ozone-induced, *Arabidopsis thaliana*, 1089
response of *Arabidopsis Adh* gene, promoter elements in, 1075
Sucrose
abscisic acid-induced heat tolerance, *Bromus inermis* Leyss cell-suspension culture, 181
nonvascular symplastic diffusion, carbon demands of growth, primary root tip of corn, 19
response to nitrogen, rice leaves, 173
Sugarcane, stem, nitrogen-fixing endophyte of, 1139
Sulfhydryl reagent, modulation of systemic signaling, wound- and systemin-induced proteinase inhibitor synthesis, tomato, 725
Symbiosomes, acetylene reduction, free bacteroids, broad bean nodules, 555
Symplast, nonvascular diffusion of sucrose, carbon demands of growth, primary root tip of corn, 19
Synechococcus
cloning of *Arabidopsis thaliana*, plastid ω-6 fatty acid desaturase, 635
heat inactivation in, photosynthetic oxygen evolution, 1313
mutant lacking iron superoxide dismutase, acclimation, photosynthetic apparatus, 287
Systemin, proteinase inhibitor synthesis induced by, modulation of systemic signaling by sulfhydryl reagent, tomato, 725

T

Temperature
growth, response to leaf nitrogen, rice, 1231
low, growth and mimicry, high-light acclimation in *Chlorella vulgaris*, 535
-sensitive mutants of *Arabidopsis thaliana*, defects, redifferentiation of shoots, 815
Thiohydroximate *S*-glucosyltransferase, immunopurification, immunocharacterization, cauliflower, 425
Thioredoxin *m*, pea cDNA fragment, cloning and sequencing, 1021
Thlaspi arvense, full-length cDNA, cytochrome P-450, cloning and sequencing, 755
Thylakoid membranes, integration of chlorophyll *a*/*b*-binding polypeptide, stromal GTP requirement, pea and tomato, 295
Thylakoid proteins, nuclear genes for, role of plastids in expression of, 1355
Tobacco
auxin sensitivity of protoplasts, *rolB* gene, *Agrobacterium rhizogenes*, 563
cell-autonomous cytokinin-independent growth, transformation by *Agrobacterium tumefaciens*, 989
competitive inhibition of high-affinity oryzalin binding, plant tubulin, amiprophos-methyl, 309
expression of bacterial cytochrome P450, activation, sulfonylurea pro-herbicide, 473
localization of boron in cell walls, association with pectin, 681
metabolites of L-phosphinothricin, 159
mixotrophic cells, chloroplastic NADP-isocitrate dehydrogenase, 593
nuclear gene expression, mitochondrial electron transport regulation, 867
ocs-like bZip-binding elements, differential strength, bidirectional *mas*1′2′, 259
protoplasts, *rolB*-transformed, auxin perception in, 1209
sterol-overproducing mutant, subcellular compartmentation of steryl-esters, regulation of sterol content, 509
Tomato
anthocyanin without mutant, complementation, dihydroflavonol 4-reductase gene, 491
aurea mutant, retention of photoinduction, cytosolic enzymes, 643
fruit development, carotenoid biosynthesis, 405
fruit homologs, 14–3–3 mammalian brain proteins, 1457
fruit membranes, chilling injury, induction of lipid phase changes, 305
plant polyphenol oxidase, import, targeting, and processing of, 1301
ripening, endo-1,4-β-glucanase, potential substrates, 965
stromal GTP requirement, integration, chlorophyll *a*/*b*-binding polypeptide into thylakoid membranes, 295
tissue, pectin methylesterase isoforms, 199
transport analog for ammonium, methylammonium, 435
wild-type and mutant, expression of polygalacturonase isoenzyme 1 subunits in, 1189
wound- and systemin-induced proteinase inhibitor synthesis, modulation of systemic signaling, sulfhydryl reagent, 725
Tonoplasts, guard cells, cationic channel, *Allium cepa*, 999
Tracheary element, differentiation and cell expansion, regulation by extracellular pH, mesophyll cultures of *Zinnia elegans*, 699
Transformation, *Agrobacterium*-mediated, clover, 81
Trifolium subterraneum (*see* Clover)
Triticum aestivum (*see* Wheat)
Tubulin, high-affinity oryzalin binding, competitive inhibition, 309

Tubulin proteins, α- and β- isotypes, accumulation, cotton fiber development, 1347
Tyrosine, light-dependent phosphorylation, *Prochlorothrix hollandica*, 629

U

UDP-glucose:sterol β-D-glucosyltransferase, membrane-bound, solubility in diethyl ether, 1067
Ultraviolet light, radiation damage, protection of maize DNA, flavonoids, 881
Uridine diphosphate glucose, metabolism and callose synthesis, cultured pollen tubes, *Nicotiana alata*, 659

V

Variable time scales, sensitivity thresholds and, plant hormone action, 1029
Veins, *Vicia faba*, immunolocalization of plasma membrane H^+-ATPase, relation to phloem loading, 691
Velvet bean, leaf, isoprene emission, 279
Vicia faba (*see* Broad bean)
Vicia faba, minor veins, immunolocalization, plasma membrane H^+-ATPase, 691
Vicia sativa, root hair deformation activity, nodulation factors and their fate, 787
Vigna radiata (*see* Mung bean)
Vitis vinifera (*see* Grapevine)

W

Water, facilitated movement, aquaporins, living plant cells, 9
Water potential, low, proline accumulation, maize primary roots, 981
Wheat
  aluminum in, genes induced by, 1455
  DNA primase, 69
  freezing tolerance-associated protein family, nucleotide sequence, 1017
  leaf protoplasts, phosphorylation of renatured protein, modulation by red and blue light, 253
  root, 2±-deoxymugineic acid biosynthesis, incorporation of label, 607
  root hairs, inward-rectifying potassium channels in, 1399
Wollastonia biflora, biosynthesis of 3-dimethylsulfoniopropionate, 103
Wounding, -induced proteinase inhibitor synthesis, modulation of systemic signaling by sulfhydryl reagent, tomato, 725

X

Xenopus, oocytes, facilitated water movement in living plant cells, aquaporins, 9
Xylem, parenchyma, ion channels, barley root, 799
Xyloglucan, potential substrates, ripening tomatoes, 965
Xyloglucanase, potential substrates, ripening tomatoes, 965

Y

Yeast, cloning of cDNA encoding ATP sulfurylase, *Arabidopsis thaliana*, 897

Z

Zea mays (*see* Corn)
Zinnia elegans, regulation by extracellular pH in mesophyll cultures, cell expansion, tracheary element differentiation, 699
